Yes right. I have a time difference amplifier which amplifies the difference between two signals, namely Start and Stop. The input-output characteristic of the amplifier is T=A(Stop-Start), where A is the gain of the amp. Stop-Start (or x in the above formula) is the time difference to be amplified, and T (or y in the formula above) is the amplified time.

Again, the output waveform is the complement of the input waveform. Because of two-state operation, rectangular waveforms like this are the normal shape of digital signals. Incidentally, a timing diagram is a picture of the input and output waveforms of a digital circuit. Examples of timing diagrams are shown in Figs. 2.3a and b.
