Familiar examples of magnetism include a compass needle's reaction to Earth's magnetic field, attraction and repulsion of bar magnets, and the field surrounding electromagnets. Yet, every moving electric charge has a magnetic field, so the orbiting electrons of atoms produce a magnetic field; there is a magnetic field associated with power lines; and hard discs and speakers rely on magnetic ...

If there's no charge inside, then the net electric flux through the enclosure is zero. An important application of Gauss's law is the Faraday cage. Basically, the electric field inside a closed conducting cage is zero. This is because the charges on the conducting cage will rearrange to cancel out any external field. Magnetism

Electrostatics and Electromagnetism - MCAT Review

Electricity and magnetism are interrelated concepts. Wrap a wire around a nail and connect the wire to a battery. The nail will be able to pick up small metal objects because it has become an electromagnet. The moving electric charges making up the electric current cause a magnetic field.
