...

Python For Loops. A for loop is used for iterating over a sequence (that is either a list, a tuple, a dictionary, a set, or a string).. This is less like the for keyword in other programming languages, and works more like an iterator method as found in other object-orientated programming languages.. With the for loop we can

execute a set of statements, once for each item in a list, tuple, set etc.

Python For Loops - W3Schools

A Survey of Definite Iteration in Programming. Definite iteration loops are frequently referred to as for loops because for is the keyword that is used to introduce them in nearly all programming languages, including Python.. Historically, programming languages have offered a few assorted flavors of for loop. These are briefly described in the following sections.
