use a method called mark and recapture, which is illustrated by the Estimating Population Size Gizmo. In the Gizmo, students choose a number of fish to tag and a number of fish to catch. For example, suppose a lake contains a total of 20 tagged fish. If students go out and catch 10 fish and only 1 is ...

7. Recapture rates are high enough to support an accurate estimate.

The Lincoln-Peterson calculation tends to overestimate the population size, especially if the number of recaptures is small.
