All About the Human Respiratory System Anatomy and function. The entire respiratory system contains two tracts: the upper respiratory tract and the lower... Common conditions. Bacteria, viruses, and even autoimmune conditions can cause illnesses of the respiratory system. Some... Treatments. ...

Respiratory System: How It Works, Common Issues, and More

Human respiratory system, the system in humans that takes up oxygen and expels carbon dioxide. The major organs of the respiratory system include the nose, pharynx, larynx, trachea, bronchi, lungs, and diaphragm. Learn about the anatomy and function of the respiratory system in this article.

human respiratory system | Description, Parts, Function ...

The respiratory system is the network of organs and tissues that help you breathe. It includes your airways, lungs, and blood vessels. The muscles that power your lungs are also part of the respiratory system. These parts work together to move oxygen throughout the body and clean out waste gases like carbon dioxide.

Respiratory System: Functions, Facts, Organs & Anatomy

The major organs of the respiratory system are the lungs. When the lungs expand, the body inhales fresh air, which is passed down from the mouth or nose through the trachea into the bronchial tubes of the lungs and into the tiny alveoli air sacs.

The Respiratory and Circulatory System in the Human Body ...

Respiratory system definition Consisting of specific respiratory organs, blood vessels and muscles, the respiratory system is responsible for inhaling oxygen and carrying out the exchange of oxygen and carbon dioxide in the human body.Main functions of the respiratory system Main functions of the respiratory system

The Respiratory System

The upper respiratory system, or upper respiratory tract, consists of the nose and nasal cavity, the pharynx, and the larynx. These structures allow us to breathe and speak. They warm and clean the air we inhale: mucous membranes lining upper respiratory structures trap some foreign particles, including smoke and other pollutants, before the ...

Upper Respiratory System | Respiratory Anatomy - Human Body

organism respiration, process of gas exchange- the release of carbon dioxide and the uptake of oxygen between the lungs and environment. * what is the basic function of the human respiratory system. to bring about the exchange of oxygen and carbon dioxide between the air and tissue.
