Quantum Theory is a collection of papers presented at the 1977 conference on the Mathematical Foundations of Quantum Theory, held in New Orleans. The contributors present their topics from a wide variety of backgrounds and specialization, but all shared a common interest in answering quantum issues.

The theory of distributions was used to provide a mathematical framework for quantum field theory (Wightman 1964). The rigged Hilbert space was used to do so for quantum mechanics (Böhm 1966) and then for quantum field theory (Bogolubiubov et al. 1975).

The theoretical foundation is important because it will be the lens through which you evaluate your research problem and research questions. The theoretical framework section is typically required for quantitative studies, while a conceptual framework is used in qualitative studies.
